The Industry's Newest, Smartest Tank & Battery Monitor

We took the age-old concept of the digital readout tank monitor and integrated microprocessor technology to create the intelligent Intelli-View Tank Monitor, which features

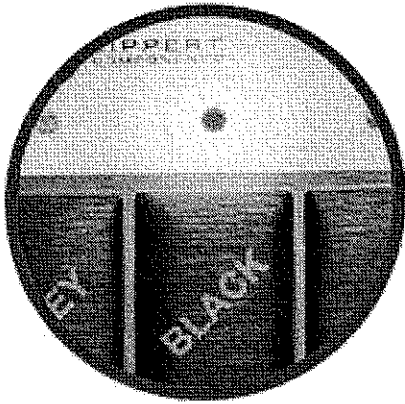

- **Continuous Tank Monitoring.** By pressing and holding the desired tank button, Intelli-View will continuously display its water level. This helps conserve fresh water levels and is very convenient when fresh water is constantly in use.
- **Full Tank Alert Function.** A flashing light notifies users if the black water tank becomes full, reminding them to empty black and fresh water tanks.

Quick Facts

- Updated, modern design for today's RV
- Monitors fresh, grey, black and galley tanks as well as battery level
- Offers continuous monitor option, one tank level can be visible at all times by holding the desired tank button for three seconds
- When a tank is full, its corresponding light will flash
- Micro-processor technology will allow LCI to develop even more intelligent functions
- Integrated pump switch

By pressing and holding the desired tank button for three seconds, the user receives a continuous readout

If the black tank becomes full, Intelli-View will give the user a flashing light notification
